

Contents

Executive summary	ES-1
Glossary of acronyms	1
1.0 Introduction	1-1
1.1 Background	1-1
1.2 Risk assessment approach	1-2
2.0 Study area and description of facilities	2-1
2.1 Study area	2-1
2.2 Overview of facilities	2-1
2.2.1 Facilities included in the cumulative risk calculations	2-1
2.2.2 Facilities not included in cumulative risk calculations	2-2
3.0 Hazard identification	3-1
3.1 Identification of COPC	3-1
3.2 Facility emissions	3-1
4.0 Air dispersion and deposition modeling	4-1
4.1 Model selection	4-1
4.2 Model options	4-1
4.3 Meteorological input data.....	4-1
4.4 Dispersion coefficients.....	4-2
4.5 Source data.....	4-2
4.5.1 Stack parameters	4-2
4.5.2 Particle size distribution	4-3
4.6 Good engineering practice (GEP) stack height analysis.....	4-4
4.7 Receptor grid.....	4-5
4.8 Modeling results.....	4-5
5.0 Toxicity assessment.....	5-1
5.1 Compound-specific dose-response values.....	5-1
5.1.1 Toxicity assessment for polynuclear aromatic hydrocarbons	5-1
5.1.2 Toxicity assessment for polychlorinated biphenyls	5-2
5.1.3 Toxicity assessment for dioxins/furans.....	5-2
5.1.4 Toxicity assessment for lead	5-2

5.1.5 Toxicity assessment for mercury5-3

5.2 Health benchmarks for short term exposure.....5-3

6.0 Exposure assessment..... 6-1

7.0 Risk characterization..... 7-1

7.1 Risk characterization results..... 7-1

7.1.1 Carcinogenic risk characterization..... 7-2

7.1.2 Noncarcinogenic risk characterization..... 7-2

7.2 Breast milk exposure for dioxins 7-3

7.2.1 Short term risk characterization 7-3

7.3 Air and Non-Air Media Monitoring 7-3

8.0 Uncertainty analysis..... 8-1

8.1 Hazard identification 8-1

8.1.1 Selection of compounds..... 8-1

8.1.2 Emission rates..... 8-1

8.1.3 Air quality modeling..... 8-1

8.2 Toxicity assessment..... 8-2

8.2.1 Animal to human extrapolation 8-2

8.2.2 High to low dose extrapolation..... 8-2

8.3 Exposure assessment 8-2

8.3.1 Estimation of surface water and sediment concentrations 8-2

8.4 Risk characterization..... 8-3

8.4.1 Risk from multiple compounds..... 8-3

8.4.2 Combination of several upper-bound assumptions 8-4

9.0 Summary and conclusions..... 9-1

9.1 Potential carcinogenic risk..... 9-3

9.2 Potential noncancer hazard..... 9-4

10.0 References..... 10-1

APPENDICES

- A COMPARISON OF 1989 AND THE 2005 CUMULATIVE HEALTH RISK ASSESSMENTS**
- B METHODOLOGY FOR COMPUTING EMISSION RATES**
- C CHEMICAL SPECIFIC PARAMETERS**
- D MERCURY MODELING SUMMARY**
- E SITE SPECIFIC PARAMETERS**
- F RRF STACK TEST DATA**

List of Tables

Table ES-1	Total Excess Lifetime Cancer Risk (ELCR) Predicted for Residential Maximum Exposure Scenarios.....	ES-7
Table ES-2	Total Excess Lifetime Cancer Risk (ELCR) Predicted for Nearby Farm Locations.....	ES-8
Table ES-3	Total Excess Lifetime Cancer Risk (ELCR) Predicted for Nearby Fishers	ES-9
Table ES-4	Total Noncarcinogenic Hazard Index (HI) for Residential Maximum Exposure Scenarios.....	ES-10
Table ES-5	Total Noncarcinogenic Hazard Index (HI) Predicted for Nearby Farm Locations	ES-11
Table ES-6	Total Noncarcinogenic Hazard Index (HI) Predicted for Nearby Fishers.....	ES-12
Table 3-1	Emission rates.....	3-3
Table 3-2	RRF Stack Test Summary (lb/hr) – Cadmium, Mercury and Dioxins	3-4
Table 4-1	Stack Parameters for the RRF	4-6
Table 4-2	Stack Parameters for Mirant Units	4-6
Table 4-3	Stack Parameters for NIH Boilers.....	4-7
Table 4-4	Particle Size Distribution RRF Stack.....	4-8
Table 4-5	Particle Size Distribution Mirant Coal Stack.....	4-8
Table 4-6	Particle Size Distribution Mirant HRSG Stacks.....	4-9
Table 4-7	Particle Size Distribution NIH Boiler Stacks.....	4-9
Table 4-8	Maximum Cumulative Air Concentrations.....	4-10
Table 5-1	Benzo(a)pyrene Toxicity Equivalency Factors (BAP-TEFs).....	5-4
Table 5-2	2,3,7,8-TCDD Toxic Equivalents (TCDD-TE)	5-5
Table 6-1	Exposure Assumptions	6-5
Table 7-1	Total Cumulative Excess Lifetime Cancer Risk (ELCR) - Residential Maximum Exposure Scenarios.....	7-5
Table 7-2	Total Excess Lifetime Cancer Risk (ELCR) Predicted for Nearby Farm Locations.....	7-6
Table 7-3	Total Excess Lifetime Cancer Risk (ELCR) Predicted for Nearby Fishers	7-7
Table 7-4	Total Noncarcinogenic Hazard Index (HI) - Residential Maximum Exposure Scenarios	7-8
Table 7-5	Total Noncarcinogenic Hazard Index (HI) Predicted for Nearby Farm Locations	7-9
Table 7-6	Total Noncarcinogenic Hazard Index (HI) Predicted for Nearby Fishers.....	7-10
Table 9-1	Total Excess Lifetime Cancer Risk (ELCR) By Source	9-6
Table 9-2	Total Cumulative Excess Lifetime Cancer Risk (ELCR) – Inhalation and Indirect Pathways	9-7
Table 9-3	Total Noncarcinogenic Hazard Index (HI) by Combustion Source	9-8
