

Carroll County Code Implementation Policy
Water Resource Management, Chapter 218

Effective Date: September 2, 2008

Issue: Clarification to the Exemptions section (§218-4B (1) and (2)) of Chapter 218.

B. *Modification to businesses which do not involve an increase in:*

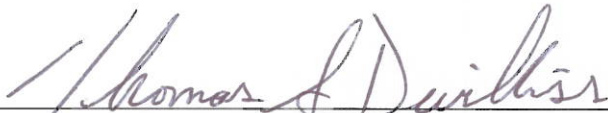

(1) Impervious cover of more than 10% or 40,000 square feet, whichever is less, and (2) the storage and handling of a regulated substance.

Policy:

To determine if a modification to an existing business meets the exemption B (1), apply the following criteria:

- 1) Calculate the impervious area associated with operating the business. The impervious area should include, but not be limited to existing structures, parking, and storage areas used for the business.
- 2) If the proposed impervious area is greater than 10% of the impervious area associated with operating the business, then the proposed modification is not exempt from the requirements of Chapter 218.
- 3) If the modification to the business creates additional impervious area of more than 40,000 square feet, then the modification is not exempt from the requirements of Chapter 218.

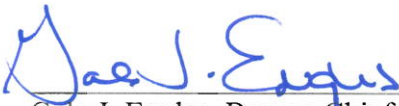

If a modification to a business involves an increase in the storage or handling of a regulated substance B (2) then, regardless of the amount of impervious area added, the modification to the business is not exempt from the requirements of Chapter 218.
